

BDD Style Assertions

Jonathan Mills

@jonathanfmills www.jonathanfmills.com

Let's Talk Assertions

Assert is clunky

Chai for better assertions

Two options

expect

should

Verifying objects

Promises

```
assert.equal(false, auth);
```

Assert Is Clunky...

```
describe('isAuthorized', function () {  
  it('should return false if not authorized',  
    function (done) {
```

BDD Is Descriptive

```
describe('isAuthorized', function () {  
  it('should return false if not authorized',  
    function (done) {
```

BDD Is Descriptive

```
expect(something).to...
```

Expect Is a Step in the Right Direction

```
expect(something).to.be...  
expect(something).to.equal...  
expect(something).to.have...
```

Expect Is a Step in the Right Direction

```
expect(auth).to.be.true;
```

Expect Is a Step in the Right Direction

something.should...

Should - Clear, Natural Language

```
something.should...
```

Should - Clear, Natural Language

Should adds itself to `Object.prototype`

```
something.should.be...  
something.should.equal...  
something.should.have...
```

Should - Clear, Natural Language

Should adds itself to `Object.prototype`

```
auth.should.be.true...
```

Should - Clear, Natural Language

Should adds itself to `Object.prototype`

What About Objects?

```
var iAmNull = null;  
iAmNull.should.not.exist;
```

Should Has a Problem...

null is not an Object

Async with Promises

We Talked Assertions

Assert is clunky

Chai for better assertions

Two options

expect

should

Verifying objects

Promises
